

The Ultimate Payment Experience

What is PayGlobe

PayGlobe is the payment gateway for merchants seeking an innovative, modern **solution for payment acceptance**. Merchants can streamline payment processing and **accept card payments in all countries** through this centralised face-to-face and eCommerce gateway.

Payglobe gives merchants **immediate access** to transaction data originating from their network of terminals, regardless of the country, and the ability to **select the best acquirer** from a number of international players. With PayGlobe, merchants are maximising on recent regulations for **P2PE and cross border payments** to overcome the current fragmentation in the card payment acceptance market.

Merchants can **negotiate better fees and conditions** with large European acquirers, deploy the same terminal in all countries, and limit the scope of their PCI compliance assessment. Payglobe is a **SAAS platform hosted by PCI-DSS certified datacenters**, significantly reducing costs and time-to-market. Plus, PayGlobe can be customized to meet specific business needs by integrating with **loyalty** and **CRM** systems for a truly comprehensive and innovative solution.
